RADIO BROADCASTERS' CLUB FORMS AT MSOE

by Robert Radke

The Radio Broadcasters Club, a newly formed organization, is heading what might be the largest and most versatile MSOE student activity. The club plans in the near future to bring a radio station to MSOE.

The first undertaking of the club will be the organizing, building, and manning of a carrier current station serving both domitories. This sort of system utilizes the power wiring in the building as an "antenna" system and permits reception of the broadcast only, in the building itself. Future plans also include a non-commercial FM stereo station based at the school and serving Milwaukee and the surrounding area. The extent of these plans will be determined by the amount of interest and participation shown by the students in such a venture.

The station will be built from the "ground up" with a projected starting date of the Fall Quarter next year. By that time, it is hoped that room(s) will be available to house the facility and also some equipment will be on hand. Interested students will have the opportunity to help build and set up the equipment, studios, and provide programming and management services.

We hope that any interested persons will keep the club in mind next Fall as to both membership and participation.

MSOE Students Attend IBS Convention

The 29th annual Intercollegiate Broadcasting System convention was held recently in Chicago. The IBS convention was held in conjunction with the National Association of Broadcasters convention being held the following week. Like the NAB, IBS is an association of broadcasters to further the broadcasting field and maintain ethical practices of broadcasting. But unlike the NAB, which is for commercial broadcasters, IBS is solely for college radio stations.
